

# VS Code Professional Extensions

All extensions discussed so far for a clean, modern and professional VS Code setup.

## Themes / Overall Look

- **Tokyo Night** — Modern dark theme with clean blue/purple colours.
- **One Dark Pro** — Popular professional dark theme with clear syntax colours.
- **Dracula Official** — Dark theme with colourful, distinctive syntax highlighting.
- **Catppuccin for VSCode** — Soft, modern and eye-friendly colour palette.
- **Ayu** — Minimal and professional-looking theme.
- **GitHub Theme** — Clean theme inspired by GitHub's interface.

## Icons / File Display

- **Material Icon Theme** — Professional file and folder icons; supports HTML, CSS, JavaScript, Java, Python and more.
- **vscode-icons** — Alternative file and folder icon theme.

## Professional UI / Visual Add-ons

- **Peacock** — Changes the VS Code window accent colour, useful for a polished setup.
- **Indent Rainbow** — Makes indentation levels easier to see visually.
- **CodeSnap** — Creates clean screenshots of code.

## Code Formatting / Quality

- **Prettier - Code formatter** — Automatically formats code consistently.
- **Error Lens** — Shows errors and warnings directly beside the relevant code.
- **Code Spell Checker** — Helps catch spelling mistakes in code, comments and text.
- **Todo Tree** — Collects TODO/FIXME and similar comments in one place.

## Web Development

- **Live Server** — Runs HTML/CSS/JavaScript projects with a local development server.
- **Auto Rename Tag** — Automatically updates the matching HTML/XML tag when one tag is renamed.
- **Auto Close Tag** — Automatically adds closing HTML/XML tags.

## Git / GitHub

- **GitLens** — Adds powerful Git and code-history features to VS Code.

## Recommended setup

**For professional look:** Tokyo Night + Material Icon Theme + Peacock

**For web development:** Live Server + Auto Rename Tag + Auto Close Tag

**For clean code:** Prettier + Error Lens + Code Spell Checker

**For GitHub:** GitLens
